St David's College

Client: St David's College

Value:	£3M
Procurement:	JCT D&B
Sector:	Education
Role:	Employer's Agent Quantity Surveyor Project Manager Principal Designer

Description

RPA was thrilled to contribute to the team responsible for completing the new teaching block for St. David's College, adhering to BREEAM standards. RPA were acting as Employer's Agent, Quantity Surveyor, Project Manager and Principal Designer and the project was completed by Andrew Scott Ltd.

This innovative building spans two stories, designed with a focus on energy efficiency. The ground floor accommodates ICT rooms and a lecture theatre, while the first floor features additional classrooms and administrative offices.

As a part of the project, external space was transformed into a breakout area, offering students a space to socialize and study, also the rationalisation and refurbishment of onsite car parking and provision of bike storage and electric car charging stations together with a fully SAB compliant sustainable drainage system for the College

To power the new building, photovoltaic technology was integrated into the main roof, while the curved canopy was adorned with an eco-friendly roof finish.
